

KÄRCHER

TRUCK WASH SOLUTIONS

PROFESSIONAL | TRUCK WASH

WHY KÄRCHER TRUCK WASH:

1

Flexible Washing Options

Configurable for various wash programs, from quick rinses to intensive cleaning, allowing operators to meet specific cleaning requirements for different types of vehicles. Available in 4 different heights: 3.6m, 4.2m, 4.6m or 5m.

3

High-Pressure Intensive Pre Wash

Delivers strong water pressure to remove dirt, grime, and road residue efficiently, enhancing the cleaning effectiveness, especially for larger vehicle surfaces.

2

Advanced Brush Technology

Equipped with 3 high-quality brushes that adapt to vehicle contours, ensuring thorough cleaning, including on curved and hard-to-reach surfaces, which is especially important for commercial vehicles. Customisable options available such as roof pressure.

4

Underbody Wash

Kärcher's truck underbody wash is a powerful solution designed for comprehensive cleaning of the vehicle's underside, where dirt, salt, and grime tend to accumulate. It's especially useful for trucks and commercial vehicles exposed to challenging environments like construction sites and off-road conditions.

5

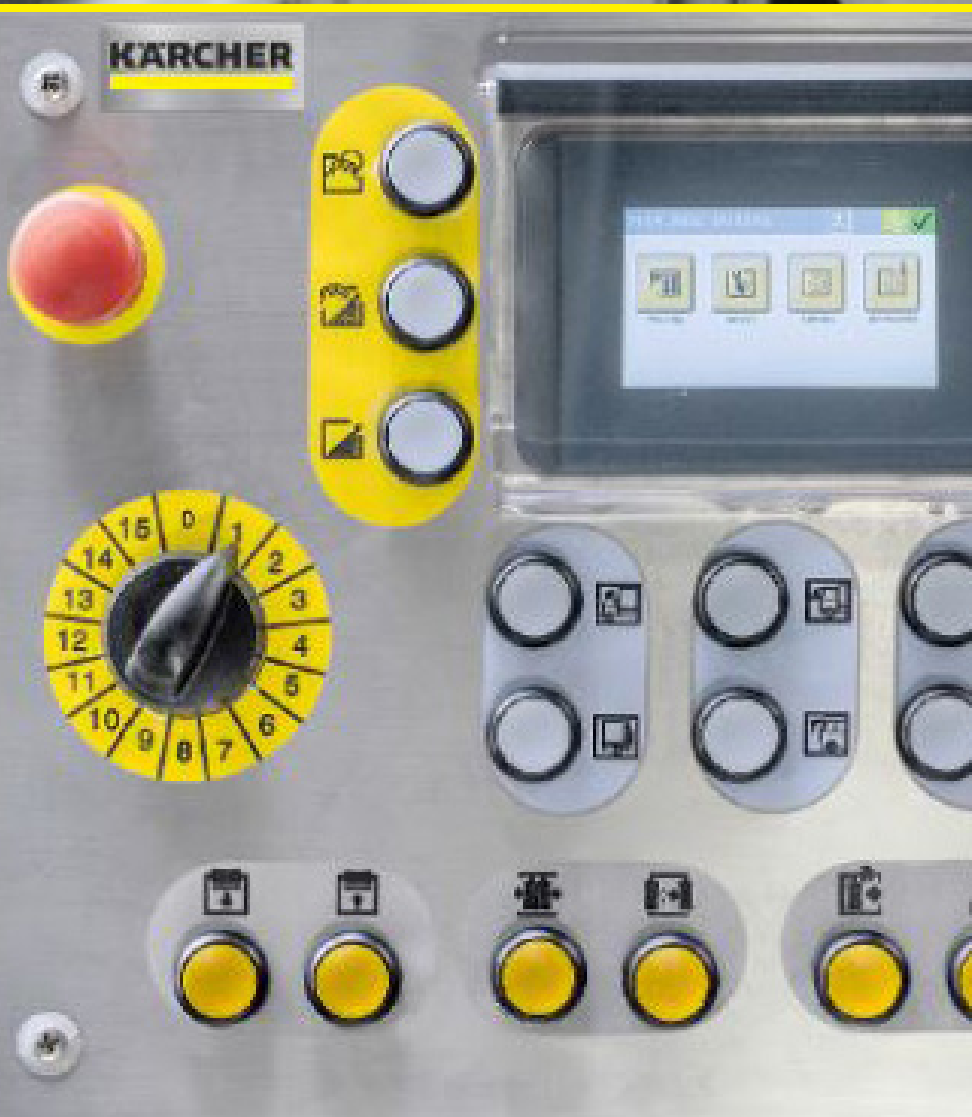

High-Pressure Rotating Nozzles

The side spinners use rotating, high-pressure water jets that deliver a 360-degree spray pattern to thoroughly clean vehicle sides. This rotation increases surface coverage and helps remove tough, caked-on dirt more effectively than static nozzles.

7

Eco-Friendly Features

Options for water recycling help reduce water consumption, while eco-friendly detergents are compatible with the system, aligning with sustainable practices and reducing environmental impact.

6

User-Friendly Control Panel

The system features an easy-to-navigate control panel with automated and semi-automated modes, enabling operators to control wash cycles effortlessly and ensure consistent results.

8

Time Saving

Our state-of-the-art auto truck wash streamlines your operations, delivering a thorough clean in just 30 minutes compared to the 2 hours of traditional methods.

YOUR DECISION IS THE RIGHT DECISION

We have the right solution for everyone. For forwarding agencies, bus companies, municipalities and professional cleaners – and for you. Deciding to purchase a Kärcher system solution is a decision to purchase a system you can always rely on – and that has been true for over 80 years.

PERFECT WITH THE RIGHT AGENTS

COMPLETING YOUR CLEAN

The manual prewash, done by hand, is an essential part of thorough vehicle cleaning. With our cold and hot water high-pressure cleaners, you can quickly, easily and cost-effectively remove dirt, even in hard-to-reach places.

Precisely what you need: fully effective at all water hardness levels and specially formulated for Kärcher wash systems. With special content materials that protect water-conveying parts against corrosion. Our ASF products with patented, easily separable formulas are environmentally friendly.

NATURALLY: WATER RECLAMATION

With Kärcher water reclamation systems, you not only save money – you also protect the environment.

WRP 8000/16000

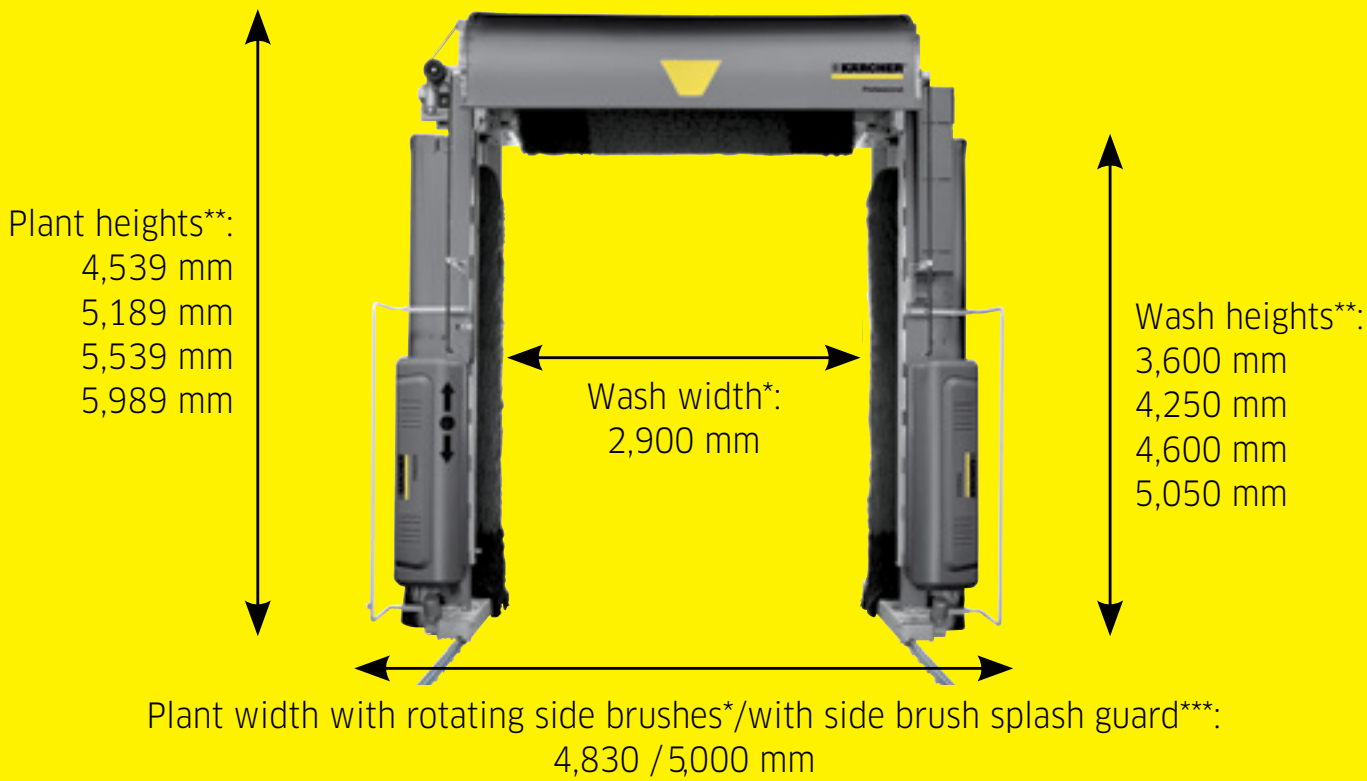

The WRP water recycling system saves up to 85% of fresh water and offers efficient and cost-effective recycling of oil-free waste water – without the addition of flocculation chemicals. Thanks to tried-and-tested sand filtration, tiny particles are safely removed. The recycled water can be reused for the system’s vehicle washing processes, offering low operating costs and a robust filtration process.

CONSUMPTION & COST PER WASH

WASH CYCLE	TOTAL TIME (MIN.)	FRESH WATER CONSUMPTION (L)	RECLAIM WATER CONSUMPTION (L)	CLEANING AGENTS CONSUMPTION (ML)	CLEANING AGENTS CONSUMPTION RM833 (ML)	POWER CONSUMPTION (KW)	APPROX. WASH COSTS
